

Ishan Jawade

ishanjawade@outlook.com | ishanjawade.com | github.com/ishanjawade

Skills

Languages: C, Java, Python, JavaScript

Frameworks and Database: SpringBoot, React.js, FastAPI, PostgreSQL, MongoDB

Cloud and AI: Linux, Git, AWS, Docker, Kubernetes, Terraform, Jenkins, CI/CD, Kafka, LLM, RAG, MCP, REST APIs

Experience

Full-Stack Developer, Saayam For All | USA

April 2026 – Present

- Needed a platform to connect people with volunteers. Build secure, scalable backend services. Developed Spring Boot REST APIs with role-based access, logging, error handling, and PostgreSQL. Delivered a reliable system enabling efficient request and user management.
- Required production-ready cloud deployment. Ensure scalability and performance. Integrated AWS, used Docker & Kubernetes, and set up CI/CD with GitHub Actions. Achieved scalable deployment with faster performance and automated releases.

Application Developer, Masycoda Solutions | India

Nov 2022 – Aug 2023

- Found high P95 latency in a distributed finance platform, which impacted user experience at peak load. Improve performance and reduce latency. Optimized slow SQL queries, added indexing, and implemented Redis caching using Spring Boot and REST APIs. Reduced P95 latency by 25%, significantly improving system responsiveness.
- Payment failure investigations were time-consuming and inefficient. Automate failure detection and analysis. Built a Python-based pipeline for log parsing, failure classification, and real-time alerts using structured logs and scheduled jobs. Reduced investigation time by ~40%, improving operational efficiency.

Application Developer Associate, Accenture | India

Jul 2021 – Oct 2022

- Needed scalability and fault isolation in a monolithic system. Improve system performance and reliability. Developed Spring Boot microservices following service-oriented architecture. Improved scalability, fault isolation, and extensibility by ~25% under production load.
- Slow and inconsistent deployments impacted release efficiency. Streamline and automate the deployment process. Built and optimized CI/CD pipelines using Jenkins and Docker with automated testing and containerized builds. Reduced deployment time by ~15% and improved release reliability.

Projects

HIPAA-Compliant Medical Records Management System

- Constructed a full-stack web application using React.js, Spring Boot, and PostgreSQL to manage hospital patient data securely and give patients complete control of their data and the ability to monitor access.
- Implemented Role-Based Access Control (RBAC), AES encryption for data storage, system-wide immutable logs for secure data sharing and monitoring, and secure file sharing.

RAG-Based Customer Support Chatbot

- Designed and implemented an end-to-end Retrieval-Augmented Generation (RAG) customer support chatbot leveraging LangChain orchestration and OpenAI APIs, enabling context-aware, document-grounded responses.
- Ingested and vectorized company documents using PostgreSQL with pgvector for efficient semantic retrieval.
- Deployed a containerized React-FastAPI application on AWS using Docker for scalable cloud hosting.

E-Commerce Platform with DevOps Automation

- Built a microservice e-commerce platform (catalog, cart, orders, users) on Spring Boot + PostgreSQL with a React frontend, using REST APIs and per-service schemas for fault isolation and independent scaling.
- Automated end-to-end CI/CD on Jenkins + Docker with multi-stage builds, automated test gates, and containerized deployments, reducing release cycles from manual steps to single-merge. Deployed to AWS EKS with Kubernetes and CloudFront CDN.

Education

Master's in Computer Science, California State University - Fullerton (GPA 3.66)

Dec 2025

B.Tech in Computer Science and Engineering, MIT ADT University, Pune (GPA 3.2)

Aug 2021
