SUMMARY

Full-Stack Software Engineer with 2+ years of professional experience designing Java/Spring Boot micro-services and React frontends on AWS. Strong foundation in advanced data structures, low-level programming, computer networks, operating systems, system design, and AI/ML. Master's degree in CS with hands-on experience from Embedded Systems, Full-Stack Development, and Cloud Deployment.

EXPERIENCE

Full-Stack Developer – Saayam For All | USA

April 2026 - Present

- Develop REST APIs for the Request and Volunteer microservices in Java Spring Boot on a cloud-native platform that connects people.
- Implement help-request CRUD, user/volunteer profile management, role-based access, AOP logging, global exception handling, and i18n using Spring Data JPA with PostgreSQL.
- Integrate AWS API Gateway, S3, and ElastiCache (Redis) for caching, document endpoints with Swagger/OpenAPI.
- Containerize with Docker, deploy on Kubernetes, and ship via GitHub Actions CI/CD.

Application Developer – Masycoda Solutions | India

Nov 2022 - Aug 2023

- High P95 latency on a distributed finance platform was hurting user experience at peak load. Reduced by 25% by tuning slow queries, adding indexes, and caching. Built with Spring Boot, REST APIs, Redis, and SQL query optimization.
- Cut payment failure investigation time by ~40% by automating log parsing, failure classification, and real-time alerts in Python with structured log processing, scheduled jobs, and alerting integrations.

Application Developer Associate – Accenture | India

Aug 2021 - Oct 2022

- Engineered Spring Boot microservices for a large-scale financial platform, service-oriented architecture, which improved horizontal scalability, fault isolation, and system extensibility by 25% under production workloads.
- Assembled and optimized CI/CD pipelines using Jenkins and Docker, introducing automated testing, containerized builds, and staged deployments, resulting in a 15% reduction in deployment time and improved release reliability.

SKILLS

Languages:	Java, C, C++, Golang, JavaScript, Python
Frameworks & Libraries:	Spring Boot, React.js, FastAPI, TensorFlow, Keras
Databases:	PostgreSQL, MongoDB, MySQL
Cloud & DevOps:	Linux, AWS, Docker, Kubernetes, Jenkins, CI/CD, Git, n8n
AI/ML:	LLM, RAG, MCP Server, Model Fine-Tuning & Training
Embedded & Systems:	STM32, Raspberry Pi, Socket Programming, Bash Scripting,, REST API

PROJECTS

HIPAA-Compliant Medical Records Management System

- Constructed a full-stack web application using React.js, Spring Boot, and PostgreSQL to manage hospital patient data securely and give patients complete control of their data and the ability to monitor access.
- Implemented Role-Based Access Control (RBAC), AES encryption for data storage, system-wide immutable logs for secure data sharing and monitoring, and secure file sharing.

RAG-Based Customer Support Chatbot

- Designed and implemented an end-to-end Retrieval-Augmented Generation (RAG) customer support chatbot leveraging LangChain orchestration and OpenAI APIs, enabling context-aware, document-grounded responses.
- Ingested and vectorized company documents using PostgreSQL with pgvector for efficient semantic retrieval.
- Deployed a containerized React-FastAPI application on AWS using Docker for scalable cloud hosting.

E-Commerce Platform with DevOps Automation

- Built a microservice e-commerce platform (catalog, cart, orders, users) on Spring Boot + PostgreSQL with a React frontend, using REST APIs and per-service schemas for fault isolation and independent scaling.
- Automated end-to-end CI/CD on Jenkins + Docker with multi-stage builds, automated test gates, and containerized deployments, reducing release cycles from manual steps to single-merge. Deployed to AWS EKS with Kubernetes and CloudFront CDN.

EDUCATION

M.S. in Computer Science - California State University, Fullerton (GPA 3.66)

Jan 2024 - Dec 2025

Software Engineering, Data Structures, Blockchain, Neural Networks, Computer Networks, Algorithms, Cloud Computing

ACHIEVEMENTS & PUBLICATIONS

Won 1st Prize at Smart India Hackathon (SIH) 2019 for developing a full-stack patient data management system featuring RBAC, secure file sharing, JWT-based authentication, and a production-ready user interface in 36 hours.
